About Us

In Encodo, you'll find a reliable partner for even the most complex and technically challenging software projects. We consider security, performance and overall quality to be of the utmost importance and we deliver — regardless of the amount of data or the size of the project. Our aim is to get the most out of your existing infrastructure, use new technology when appropriate and to optimize communication between all components. The reliability and security of the whole is a central goal. At Encodo, we put all of our experience and our knowledge at your disposal. We accompany you in all phases of your software projects and provide a solid, technical base to complement your in-house knowledge. Many years of experience in both large and small projects help us understand your requirements and anticipate key points and pitfalls. Using concepts, specifications and analyses, we write clean, maintainable software that meets or exceeds your expectations. Our experience has taught us to stay grounded — we avoid giving or accepting unrealistic goals, deadlines or false hopes. We know what we can do. What we hope for are long-term, healthy working relationships and interesting projects.

Philosophy

Encodo puts long-term and holistic thinking before short-term goals. Ethical and moral considerations guide all of our business operations — assuring us a faithful, satisfied client base and healthy growth. We use both established and newer technologies to give our clients every possible entrepreneurial advantage. Our employees and their skills are an important part of Encodo's success. We offer our employees a secure and rewarding work environment where each individual has responsibility, initiative and creativity. We also help our carefully-chosen employees improve both their technical and social skills. Our aim is to deliver high-quality work that our clients will appreciate. Taken together with our extremely high-level technical know-how, Encodo provides the ideal conditions for undertaking technically challenging and innovative projects.

Services

Encodo is active primarily in two areas:

- Software consulting and development
- Munjari, a tool that will allow almost anyone to put their ideas online.

Consulting

Our employees have experience in all aspects of software development, from analysis and design to project management and implementation. We're particularly experienced in the following areas:

- Communications software
- Server-Software
- Performance optimization
- Complex database communication
- Prototyping

The experience and know-how we bring to our consulting services also make us excellent partners in development process consulting. We have experience in reviewing existing software and proposing changes to improve its reliability and stability. Not only can Encodo build great software for you, we can help your development teams improve their current software and teach them how to write better software in the future.

Munjari

Encodo's goal is to build tools that will allow almost anyone to put their ideas online. A person's relationship with the Internet is defined by, and limited by, the tools they have at their disposal. We aim to remove those limitations by building simple tools which almost anyone can use to build themselves an online presence. In

technical terms, our goal is to make building database applications easy for the average computer user — bringing structured data to a level of accessibility equal to that enjoyed by email and web sites today. Since Munjari takes care of all of this "housekeeping", a user can begin working on content and structure immediately. Even web developers capable of doing all of the chores listed above will be happy to get their work done faster.
